About Us

I am a full-stack website developer and mostly I am passionate on web coding. I'm quite expert in using coding and markup languages like:
HTML,CSS,Javascript,PHP,Node.js,React.js,Vue.js and etc
I have completed my graduation in Software Engineering and also done many courses related to web designing, coding, and programming.
My three years of experience helped me to understand the business tricks. Now I can easily cope up with the business market and understand the consumers' needs.
Some of my business-related skills are:
Developed organizing and managing skills
Successfully planning of the different project
Improved Critical and analytical skill
Deep understanding of the business market
Connecting with consumers
For these amazing skills I can see myself in a top-ranking position in the web developing market. True that this market is growing higher day by day. But my skills are also growing as I am a very keen learning and technology lover person. That's why I find this sector very interesting and always work with my full enthusiasm.
Although I am new in freelancer.com, I will get a 5 star rating from clients and many reviews that are very helpful for my career.
I believe you can hire me without any doubt because I never failed in any of my project and made my clients happy with my skills and knowledge.

Some of our happy clients in 2023-2024:

- Trancify
- Big Splash Center
- PulseCre-8
- Phoenix Marketing Inc. Acme Warehouse
- WaveAtomic
- Enterprises Sound Off
- Fenech & Associates Inc.
- Golden Sun
- CraftsOptimize
- Capacity Ltd.
- LLCShelter 4 Kids
- Harbor Creative

Project Summary

1. I create project on google cloud platform and get service account key for face recognition.
2. I will import some packages into your laravel application.
3. I will do some coding to integrate this api to add face recognition feature.
4. This api uses images from storage so if you need alive face recognitioin I will add camera capturing functinality
5. If you need alive face recognition, then users should have cam
6. Whether users will be recognized with his alive face or prepared image will be follwed as your instruction.

Project Timeline

I think it will take about 4 days to complete this feature in total.
I will note detailed timeline as below

Project Tasks	Timeframe
Discussion about project what to do exactly	1 day
Integrating feature on my side	2 days
Feedback from you and fixing if any issues	1 day
